

Experiment -6

STUDENT MARK LIST

Aim

To create a simple Mark Sheet Processing System using Zoho One as a cloud-based Software as a Service (SaaS) application.

Procedure

1. Log in to the Zoho One cloud platform.
2. Open Zoho Creator from the Zoho One applications.
3. Create a new application for Mark Sheet Processing.
4. Create a new form named Mark Sheet Processing.
5. Add the required fields: Name of the Student, Register Number, Subjects, Marks, Average, Percentage, Rank, and Overall Performance.
6. Configure the field types according to the data required.
7. Design and arrange the form for easy user interaction.
8. Save and publish the form.
9. Enter sample student mark details into the form.
10. Submit the form and verify that the entered marks and calculated result information are stored in the cloud.
11. Test the application by entering different student marks.
12. Verify that the Mark Sheet Processing System works successfully as a SaaS application.

Implementation Input:

The screenshot shows the 'STUDENT MARK LIST' form in the V.SALMAN application. The left sidebar contains a menu with options: 'Book a Cab', 'Property Buying & Rental System...', 'Library Book Reservation Systems', 'Mark Sheet Processing System', 'Student Mark Lists' (expanded), 'STUDENT MARK LIST' (selected), 'All Student Mark Lists', and 'PAYROLL PROCESSING'. The main form area is titled 'STUDENT MARK LIST' and contains the following fields:

- Student ID: A dropdown menu with '-Select-' as the current selection.
- Name: Two text input fields labeled 'First Name' and 'Last Name'.
- MARK1: A text input field with '#####' as a placeholder.
- MARK2: A text input field with '#####' as a placeholder.
- MARK3: A text input field with '#####' as a placeholder.
- TOTAL: A text input field with '#####' as a placeholder.
- AVG: A text input field with '#####' as a placeholder.
- Submit: A blue button at the bottom right.

Output:

The screenshot shows the 'All Student Mark Lists' table in the V.SALMAN application. The table has columns for 'Student ID', 'Name', and 'MARK2'. The data is as follows:

Student ID	Name	MARK2
	SHAREEF V	95
	SALMAN V	20

Below the table, there is a detailed view of the selected record (SALMAN V) with the following data:

Student ID	Name
	SALMAN V
MARK2	20
MARK1	10
MARK3	20
TOTAL	50
AVG	16

There are also buttons for 'Edit', 'Duplicate', 'More', and 'X' at the top right of the table view.

Result

Thus, a Mark Sheet Processing System was successfully created using Zoho One and demonstrated as a Software as a Service (SaaS) application. The required fields were entered, the sample record was submitted, and the stored output was verified in the cloud
